ORIE 3120
Recitation 7
Data Visualization with Tableau

Tableau is a data analysis and visualization software that bridges the gap between information that we have in databases and ways of presenting that information that are useful to laypeople.

Although Tableau is not free, fortunately for us, Tableau offers a student license at no cost for Cornell University students.

Go to https://www.tableau.com/academic/students, and enter the required information to obtain a student licence for Tableau.

After receiving an email with your product key, click on the link in the email above the product key to download *Tableau Desktop*. **Note: We are NOT using the Tableau Prep Builder in this recitation - make sure to download *Tableau Desktop*.**

After clicking the link, open the file when it finishes downloading. Check the "I have read and accept…" box, and click install. Then allow the app to make changes, and continue making necessary steps to complete the download.

Next, follow the instructions posted on the course page to complete the exercise.

Show the TAs your finalized sheets to get checked off. If you are submitting remotely, please include screenshots of your 3 completed sheets and any necessary explanation.
